Agent Desk Handbook

Every rule, policy and condition the final prototype was built on, in one place. Nothing here is new: it records what was considered, and on what basis.

H–00

FOUNDATIONS

How to read this handbook

What this handbook is, and the labels used on every page.

This handbook collects every rule, policy, condition and limit that the final prototype, Agent Desk v7.1, was built on. It records what was considered and on what basis. Nothing in it is new, and nothing in the prototype changes because of it.

It is not Swiggy's internal manual. Swiggy's agent tools and internal rules are not public, so the design works against a working policy set made from Swiggy's public terms, Indian law, other platforms' published rules and the project's own placeholders. Every rule says which of these it comes from.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Not applicable	Not on screen	2.1	H-01 · H-B

0.1

Source tags

TAG	MEANING	HOW TO READ IT
Published	Stated in a public Swiggy document	A real, current public rule, read within its scope
Law	Indian law	Applies regardless of company policy
Adapted	Another platform's published rule, reshaped for this project	Industry practice, not Swiggy's rule
Reported	News report, legal record or user report	Evidence that something happens, not a policy
Owner	Decided by the project owner	A design decision made in this project
Assumed	A value or rule we set ourselves, with no source behind it	A placeholder to design against; never Swiggy's real policy
Inferred	Reasoned from other facts, not stated anywhere	A reading of the sources, open to correction

Tags appear only in Source columns. When a row carries two tags, the text beside it says which part rests on which source. In running text the same word appears in brackets, for example (Assumed).

0.2

Three layers

Every element on the agent's screen belongs to one of three layers. Each topic names its layer in the Details strip.

LAYER	WHAT IT IS	EXAMPLE
Data	A raw record, shown as captured	Order timeline; a customer photo; a rider's call log
Insight	An objective summary or comparison of data, traceable to its source	"Photo sent 12 min after delivery"; a policy check marked Met
Decision support	Helps the agent act; never acts or decides for them	Question templates; the decision message draft; the cost line

0.3

Codes

CODE	MEANS	WHERE
H-00…H-14, H-B	Topics in this handbook	Index
P1–P6	Policy checks on the screen (P2, P3 are not rows; see H-05)	**H-05**
T1, T2, T4	Review triggers (T3 was removed)	**H-05**
R1–R5	Rider checks	**H-07**
S1–S9	Scenarios	**H-08**
PP, GN, GAP	Swiggy public rules, guidance notes, and gaps no source covers	**H-02** · **H-B**
SW-2041…	Prototype tickets (fictional orders)	**H-08**

0.4

Status words

Policy checks and rider checks show one of four statuses. A status describes a fact; it is never a verdict on the case.

STATUS	MEANS
Met	The fact satisfies the condition
Not met	The fact does not satisfy the condition
Unknown	The fact is not available yet (for example, no amount chosen)
N/A	The condition does not apply to this case

0.5

Versions

↑ Back to index

This handbook describes the rules as built in the final prototype (policy 2.1). Earlier files, such as the frozen policy v1.3, are kept for the record. Where a rule changed, the topic lists it under **Changed**, with what replaced it.

Each topic is also issued as its own file (for example "H-05 Policy checks and triggers.pdf") with the same content and layout, so a single topic can be attached wherever it is needed.

H–01

FOUNDATIONS

Scope

What the design covers, and what it deliberately leaves out.

The interface is for one user: a Swiggy support agent who takes over a chat when the bot hands it to a human. We call this person the **escalation agent**; the term is ours, not Swiggy's job title.

DETAILS	LAYER	ON SCREEN	VERSION	RELATED
	Not applicable	Whole interface	2.1	H-03 · H-08 · H-14

1.1

Included

- Restaurant food orders placed on Swiggy in India.
- Complaints that reach a human agent after the bot, focused on refund and dispute review: missing or wrong items, quality, delivery problems.
- Three parties around every order: customer, restaurant and rider. Swiggy appears as the platform that decides and pays.
- An issue-type list of 17 subjects (see **H-09** for refund ranges). Five of them are designed end to end as playable tickets.
- Prepaid and cash-on-delivery orders.

1.2

Excluded

LEFT OUT	WHY
Instamart, Genie, alcohol, dine-out	Outside restaurant food delivery
Payments, account, coupons and cancellations as designed flows	In the issue-type list, but no path was designed. Listed in Future Scope
Restaurants or riders opening a complaint	Only the customer opens a case. Their side arrives as records, calls and chats
A safety escalation path (food safety, threats)	Proposed (Q4) and not adopted
The reviewer's screen for "Send Review" cases	A second persona; Future Scope
Real Swiggy data, staff or internal tools	Not available. All case data is fictional

1.3

Not concluded

01 **Never** a claim about how Swiggy staffs or routes its support. "Escalation agent" names a role in this concept only.

02 **Never** a claim that the five tickets represent how often each problem occurs.

↑ Back to index

H–02

FOUNDATIONS

Baseline and conscious calls

The public rules and laws the design relies on, and the four places where it knowingly departs from them.

Swiggy's public policies are the backend logic of the design. The rules below are the ones the screen actually uses. Codes PP, GN and GAP come from the project's public-policy register (**H-B**).

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Not applicable	Policy handbook pop-up; checks	2.1	**H-05** · **H-09** · **H-B**

2.1

Published rules used

CODE	RULE	USED FOR	SOURCE
PP06	Cash on delivery: the customer need not pay for a missing, wrong or damaged order reported before it is marked delivered	P4 COD timing	Published
PP08	Non-delivery caused by Swiggy or the rider: up to 100% of the order value, case by case	Whole-order refund for non-delivery	Published
PP09	The restaurant is responsible for food: quality, wrong or missing items, packaging, hygiene	Default liable party for item and quality issues	Published
PP11	Restaurant permission is needed for any refund or resolution	Replaced by restaurant terms (see 2.3, call 1)	Published
PP05	Delivery times are approximate	Delays are shown against planned times, not as broken promises	Published
PP16	Refund credit times are estimates: 5–7 business days for UPI, cards and net banking; 2 hours for some wallets	Refund timing (see H-14: the prototype message says 3–5 days)	Published
PP22	Use in-app help; Swiggy says it has no official customer-care phone line	Conflicts with the customer call (see 2.3, call 2)	Published

2.2

Law

RULE	WHAT IT SAYS	ON SCREEN
E-Commerce Rules 2020	A complaint must be acknowledged within 48 hours and resolved within one month	Not shown. The clock was removed (see H-11)
GST	Restaurant food sold through a delivery platform carries 5% GST	Used in the full-refund amount (H-09)

2.3

Conscious calls

Four places where the design departs from a public rule on purpose. Each was kept on purpose; the case study states them together rather than in a note on each item.

NO.	DESIGN KEEPS	DEPARTS FROM	WHY IT WAS KEPT
1	Restaurant terms (Full / Partial cap / None) decide what the restaurant pays; Swiggy pays anything above them	PP11: restaurant permission for every resolution. Terms work as standing consent, which no public rule establishes (GAP06)	Removes a live wait for the restaurant's answer from every case
2	The agent can call the customer	PP22: no official customer-care phone line; scam warnings	Calls resolve unclear claims faster; a masked in-app call was proposed and not adopted
3	One decision record: fault, action and cost line together	GN01 / GN02: refund eligibility is not cost liability; keep remedy, authorisation, money and recovery separate	One Confirm keeps the agent's path short
4	P5 photo stays a policy check	GAP02: no public rule requires a photo	A photo is the main customer evidence. Fairness risk: customers who can't take a photo

2.4

Not concluded

01	**Never** a public page as proof of Swiggy's internal handbook, a specific restaurant's signed agreement, or a rider's contract (GN03–GN05).
02	**Never** "final and binding" wording as removing a customer's legal remedies (GN07).

↑ Back to index

H–03

FOUNDATIONS

Roles and lifecycles

Who sets each element on the screen, and the states an order and a ticket pass through.

The core rule: the system computes facts and checks; the agent makes every decision. Nothing the agent decides is pre-filled.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
All three	Whole interface	2.1	**H-04** · **H-05** · **H-11**

3.1

Who sets what

ELEMENT	SET BY	CAN CHANGE	LOGGED
Issue type	Bot, at handover	Agent, from the list	Yes · "Changed by agent"
Policy check status	Computed from case data	Agent (Met / Not met; rider checks also N/A). No reason needed	Yes, with the original value
Evidence marking	Agent (Agree / Disagree per photo)	Agent	Yes
Subject of Error	Agent, after a call or chat with the restaurant or rider	Agent	Yes
At fault · action · reason	**Agent only.** Never pre-filled	Agent, until closed; then via Reopen	Yes
Cost line	Computed from fault, amount and restaurant terms	No	With the decision
Restaurant terms	Agreed at tie-up (fictional dates)	Read-only	No
On hold + responsible party	Agent	Agent	Yes · agent record only
Report (flag)	Agent, per party	Agent (second click removes it)	Yes

3.2

Order lifecycle

Order timeline (case column): **Placed → Accepted → Prepared → Picked up → Marked delivered**.

Rider trip log (Rider tab): **Assigned → Accepted → Reached restaurant → Picked up → Reached drop → Marked delivered**, each with its delay against a planned time (Assumed).

Restaurant preparation timeline (Restaurant tab): **Order received → Accepted → Food ready → Order packed → Handed to rider**, with food ready shown against the restaurant's own estimate.

3.3

Ticket lifecycle

STATE	WHAT HAPPENS
Waiting	In the queue rail. A wait timer runs from assignment until the agent first opens the chat
Open	Wait timer stops; the chat timer starts
On hold	Optional. Chat timer pauses; the agent records who is responsible for the delay
Decision picked	Action (and fault) chosen; a message telling the customer loads as a draft
Decision recorded	After Confirm with a reason. The agent can still Change decision
Closing	Close ticket loads closing messages; the agent sends them
Closed	Leaves the queue rail; reply bar inactive. Reopen returns it

3.4

Not concluded

↑ Back to index

01 **Never** "Marked delivered" as proof of handover. It is a status the rider set.

02 **Never** a decision on the agent's behalf at any state: no state is entered automatically except the timers.

H–04

THE DECISION

Decision flow as built

The seven steps from handover to a closed ticket, and what is recorded at each.

The steps are the order the prototype supports, not a forced sequence. The decision area stays open at any time in the prototype; the gate that locks it until the customer conversation is complete exists in code but is switched off.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Decision support	All four columns	2.1	**H-03** · **H-09** · **H-12**

4.1

Steps

STEP	THE AGENT	THE SCREEN SHOWS	LAYER
1	Opens the chat from the queue	AI Summary of the bot conversation (what the customer said, what the bot offered, bot time); the wait timer stops	Insight
2	Opens each customer photo; marks Agree or Disagree	Photo facts: issue, source, time of delivery, minutes after delivery. P5 updates	Data · Insight
3	Calls or messages the restaurant or rider; records Subject of Error	Messages or call transcript in a panel that appears only after contact	Data
4	Picks At fault and an action	A draft message that explains the decision to the customer; the customer's scripted reply	Decision support
5	Picks a reason; presses Confirm	"Choose a reason" appears only if Confirm is pressed without one. Confirm is never blocked by the conversation	Decision support
6	Presses Close ticket; sends the closing messages	Closing messages, at most two in a row before the customer replies	Decision support
7	Nothing more to do	Closed panel: "₹X refunded · Fault by Y", audit trail, restaurant report. Reply bar inactive until Reopen	Data

4.2

What blocks Confirm

MISSING	SHOWN
No action picked	Confirm inactive
Action picked, no fault (except Send Review)	"Choose a fault", shown at once
No reason	"Choose a reason", shown only after Confirm is pressed

Nothing else blocks Confirm. The decision message step is the agent's duty, not a lock.

4.3

Audit trail

Every action is written to the audit trail with its time: photo marks, status changes (with the original value), calls and chats, Subject of Error, hold and its responsible party, reports, the decision and the closing messages. The decision line lists every policy check's status at the moment of Confirm. A "Send Review" case attaches the audit trail for the reviewer.

4.4

Not concluded

↑ Back to index

01 **Never** a default outcome. All four actions carry equal weight and none is pre-selected.

02 **Never** a change of decision because of the customer's reply. The message explains the decision; pushback leads to the "decision is final, or another review" line, and the decision stays.

H–05

THE DECISION

Policy checks and triggers

The conditions the screen checks against case facts, and the review triggers that fire on their own.

Policy checks answer one question: does this fact meet this condition? They help the agent see which conditions hold. They never add up to a verdict.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Insight	Insights column · Policy checks	2.1	H-06 · H-07 · H-13

5.1

Policy checks

ID	CHECK	FACT CHECKED	STATUS RULE	SOURCE
P1	Issue type	The issue type from the bot or the agent	Always Met; shows "From bot" or "Changed by agent"	Published Adapted
P4	COD timing	Complaint time vs marked-delivered time. **Cash-on-delivery orders only**	Met if reported before delivery; Not met after	Published
P5	Evidence	Customer photos and the agent's marks. **Photo-based issue types only**	Met: agent agreed with at least one photo · Not met: no photo, or disagreed with all · Unknown: not reviewed · N/A: issue type needs no photo	Assumed
P6	Restaurant terms	The restaurant's agreed refund terms vs the amount chosen	Full refunds: Met · No refunds: Not met · Partial cap: Met within the cap, Not met above it, Unknown until an amount is chosen	Owner Assumed

5.2

Review triggers

ID	TRIGGER	FIRES WHEN	SOURCE
T1	High value	A refund amount above ₹500 is chosen	Adapted Assumed

ID	TRIGGER	FIRES WHEN	SOURCE
T2	First-time customer	The customer has no completed orders before this one	Adapted
T4	Conflicting records	The rider's record and the customer's claim disagree (set in the case data)	Assumed

T1 and T2 adapt Uber Eats' review triggers; the ₹500 limit in T1 is Assumed. A trigger appears as a chip only when it fires. It is a fact that a second review may be needed, not a suspicion.

5.3

How it appears

- Collapsed: one row with the stacked status icons, in number order.
- Expanded: one row per check, with its status, a short fact and the full fact on hover.
- The agent can change a status from a menu. The row then shows who changed it, and the original value stays on hover and in the audit trail.
- Question templates are offered only for checks that are Not met or Unknown (**H-12**).
- P2 (default liable party per issue type) is not a row. It appears only as a line in the Policy handbook pop-up.

5.4

Changed

ID	EARLIER	FINAL
P2	~~A visible row~~	Handbook line only, so it never sits next to At fault like a pre-fill
P3	~~Claim within 24 h, a row~~	An upstream gate: late complaints never reach the agent. 24 h (Assumed)
P6	~~Live restaurant permission, with a 10-min no-reply point~~	Restaurant terms agreed at tie-up
P7	~~Amount within policy range~~	Removed from the checks; the refund rule lives in H-09
P8	~~Within ₹500 agent limit~~	Removed from the checks; ₹500 survives as trigger T1
T3	~~Late filing~~	Removed with P3
Menu	~~Status menu with Unknown~~	Menu offers Met / Not met; Unknown can still be computed

5.5

Not concluded

↑ Back to index

01	**Never** an overall pass or fail. There is no "all checks met" summary.
02	**Never** a reason to deny from a Not met check, or a reason to approve from a Met one. The agent decides with the checks as input.
03	**Never** suspicion of the customer from a fired trigger.

H–06

THE DECISION

Evidence model

What each kind of evidence on the screen can show, and what it cannot show on its own.

Evidence is shown as captured, with who supplied it and when. The agent's Agree / Disagree mark is the only judgement applied to it, and that mark is the agent's, logged under their name.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Data	Customer evidence; party tabs	2.1	**H-05** · **H-07** · **H-13**

6.1

Evidence types

EVIDENCE	SUPPLIED BY	USEFUL FOR	NOT ENOUGH BY ITSELF TO SHOW
Customer photo	Customer, via the bot or chat	What arrived, as the customer shows it	What was packed, or who caused the problem
Order timeline	System	When each status was set	That the physical event happened
Rider location at "marked delivered"	System (~m from the drop address)	Whether the rider was near the address	That the order was handed to the customer
Rider trip log and delays	System; planned times (Assumed)	Where time was lost	Why it was lost
Attempts to reach customer	System call log	That calls were made and how long they lasted	What was said
Incidents reported	Rider, in the app	What the rider logged and when	That the incident happened as described
Preparation timeline and KOT	Restaurant system	What the kitchen received and marked packed	What reached the customer
Call transcript or chat with a party	Restaurant or rider, recorded	That party's account	That the account is correct

EVIDENCE	SUPPLIED BY	USEFUL FOR	NOT ENOUGH BY ITSELF TO SHOW
AI Summary	Generated from the bot chat; labelled AI	A quick read of the handover	Anything the bot chat does not contain

6.2

Photo viewer

Each photo opens with four facts: **Issue**, **Source** (camera or gallery, via the bot or chat), **Time of delivery**, and **Photo sent (+N) min after delivery**. The agent marks Agree or Disagree; the row shows a tick, a cross or "?" until reviewed.

6.3

Uneven evidence

Riders and restaurants log no photos in this design. This is a project assumption, not a verified fact. Photo evidence therefore comes only from the customer, the party making the claim. Rider-side evidence is limited to system records. This imbalance is stated in the case study's limitations.

6.4

Changed

ID	EARLIER	FINAL
Photos	~~Delivery and packing photos~~	Removed: not logged by riders or restaurants
OTP	~~OTP and location ping under Evidence~~	Rider location moved to the Rider tab; no OTP
Tags	~~Photo tag chips the agent confirms~~	Specified earlier; not in the final prototype

6.5

Not concluded

01	**Never** "verified" or "suspicious" on any evidence.
02	**Never** doubt from timing. "Sent 40 min after" is a time, not a judgement.

↑ Back to index

H–07

THE DECISION

Rider checks and restaurant terms

The facts checked about the rider's trip, the restaurant's agreed refund terms, and what the agent records after contacting either party.

Swiggy publishes no rider-conduct rules that the project could access. R1–R5 are therefore our own, two of them adapted from Uber's published courier rule.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Data · Insight	Rider tab · Restaurant tab	2.1	H-05 · H-09

7.1

Rider checks

ID	CHECK	FACT CHECKED	VALUE	SOURCE
R1	Delivered at address	Rider's distance from the drop address at "marked delivered"	Within 100 m	Assumed
R2	Called before unreachable	In-app call log	At least 1 call. N/A unless the rider reported the customer unreachable	Adapted, Reported
R3	Waited at door	Time between arrival and ending the delivery	At least 7 min. N/A unless reported unreachable	Adapted, Assumed
R4	On time	Delay added at the rider's own steps, from the trip log	Within 10 min grace	Assumed
R5	Incidents in time	Incident times vs "marked delivered"	Logged before delivery. N/A if none	Assumed

R2 adapts Uber's rule (arrive, call in-app, wait before cancelling); call logging is reported in a 2024 consumer case against Swiggy. R3 adapts the same rule; its 7-minute value is Assumed. The checks are listed R1 → R5 in the panel and in the stacked icons.

7.2

Restaurant terms

TERMS	P6	WHO PAYS IF THE RESTAURANT IS AT FAULT
Full refunds	Met	Restaurant pays the whole refund

TERMS	P6	WHO PAYS IF THE RESTAURANT IS AT FAULT
Partial, up to ₹X per order	Met within the cap; Not met above; Unknown until an amount is chosen	Restaurant up to the cap; Swiggy pays the rest
No refunds	Not met	Swiggy pays the whole refund

Each restaurant picks its terms at tie-up (the terms and dates in the tickets are Assumed). The screen shows the terms and the date agreed. They are read-only.

7.3

Subject of Error

After a call or chat, the agent records what the party said. The field stays hidden until there has been contact with that party.

RESTAURANT OPTIONS	RIDER OPTIONS
Wrong dish packed	Order not handed over
Wrong variant packed	Handed over as the delivery note asked
Item not packed	Handed to someone other than the customer
Order swapped with another order	Delay in transit (traffic, weather, road closure)
No error found by restaurant	Damaged or spilled in transit
	No error found by rider

7.4

Changed

ID	EARLIER	FINAL
R1–R5	~~In the insights column~~	Rider tab only
R4	~~Promised vs actual time~~	Derived from the rider's own steps in the trip log
R1–R5	~~Grouped by status~~	Listed in number order

7.5

Not concluded

01	**Never** fault from a rider check. A Not met check is a fact about the trip; the agent still chooses who is at fault.
02	**Never** consent to a specific refund from the restaurant's terms (GN04).

↑ Back to index

H–08

THE DECISION

Scenario sheets

The nine scenarios the design was tested against, and a fixed sheet for each one that can be played in the prototype.

All orders, names, amounts and histories are fictional. Each playable ticket scripts its paths end to end; other fault and action choices stay clickable. Statuses below are as the ticket opens, before the agent acts.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
All three	Five prototype tickets	2.1	**H-05** · **H-09** · **H-14**

8.1

All scenarios

ID	SCENARIO	WHAT IT TESTS	IN THE PROTOTYPE
S1	Clean missing item	The shortest path; whether "no default outcome" slows a clean case	Not built
S2	Wrong item, thin evidence, past refunds	Whether history reads as context; whether a late photo is noticed	**SW-2041**
S3	Non-delivery, conflicting records	Whether both sides are visible without the screen leaning	**SW-2063**
S4	First-time customer, damaged packaging	Whether "No history" reads as neutral	Not built
S5	Customer misbehaviour → report (quality complaint)	Whether a report stays out of the refund decision; review route	**SW-2091**
S6	Quality complaint, restaurant history	Whether restaurant history gets the same treatment	Not built
S7	Late filing	Not tested	~~Removed~~: late complaints never reach the agent
S8	Missing item, restaurant terms "No refunds"	Whether the cost moves to Swiggy visibly	**SW-2070**
S9	Late delivery, customer goes offline → On hold	Hold, responsible party, rider delay	**SW-2078**

S5 was "permission stalled" in v1.3, a capped wrong-item case in v2.0, and later became the report scenario. S8 was "restaurant refuses" in v1.3 and became the "No refunds" terms case in v2.0.

8.2

Sheets

↑ Back to index

S2 · Wrong item · SW-2041

ORDER	Siddharth M. · Tandoor House · Prepaid (UPI) · 1 × Kadai paneer ₹240 (affected), 2 × Garlic naan ₹110 · delivery ₹30, packaging ₹15, tip ₹20
FACTS ON SCREEN	Marked delivered 20:21, complaint 20:29 · 2 customer photos (20:31, 21:09) · customer: 1 raised, 1 refunded, of 12 orders · restaurant: 37 complaints, 15 upheld, of 1,860 orders
CHECKS	P1 Met · P5 Unknown until the photos are reviewed · P6 Met (full refunds)
TRIGGERS	None
DEFAULT LIABLE	Restaurant (handbook line only)
PATHS	1. Photos agreed → restaurant admits a swapped order → Restaurant · Full Refund ₹297 · 2. Photos disagreed → Customer · Deny · 3. Photos agreed → restaurant finds no error → Send Review ("Records conflict")
NEVER	that 1 past refund makes this claim doubtful

S3 · Not delivered (marked delivered) · SW-2063

ORDER	Pooja S. · Hyderabadi Handi · Prepaid (card) · 3 items ₹610, all affected · delivery ₹35, packaging ₹20, tip ₹25
FACTS ON SCREEN	Marked delivered 20:52 (planned 20:35), complaint 20:58 · rider ~40 m from the drop address · rider: 41 complaints, 14 liable, of 413 deliveries; rating 2.9 · priority dot set

ORDER	Karan J. · Burger Point · Prepaid (UPI) · 2 × Crispy veg burger ₹320, 1 × Masala fries ₹100, all affected · delivery ₹30, packaging ₹15, tip ₹30
FACTS ON SCREEN	Planned 20:30, marked delivered 21:05 · rider: 2 calls to the customer, 1 incident (route changed, 20:45) · customer goes offline once in chat · priority dot set
CHECKS	P1 Met · P5 N/A · P6 Met · Rider: R1 Met, R4 Not met (+31 min at rider steps), R5 Met, R2, R3 N/A
TRIGGERS	None
DEFAULT LIABLE	Delivery partner or Swiggy
PATHS	Trip delays and a torn seal → Rider · Full Refund ₹486. On hold is available while the customer is offline
NEVER	the customer's time offline as part of their history

H–09

THE DECISION

Refund and cost rules

The four actions, how each refund amount is worked out, and how the screen states who pays.

No public Swiggy rule sets a refund formula (GAP04). The formula below is the project's own. The amount appears only after the agent picks an action; the system never suggests one.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Insight · Decision support	Decision area · cost line	2.1	**H-05** · **H-07** · **H-12**

9.1

Actions

ACTION	NEEDS	AMOUNT
Full Refund	At fault + reason	Full refund rule (9.2)
Partial	At fault + reason	Affected items' prices; optional coupon
Deny	At fault + reason	₹0
Send Review	Reason	None; the case goes to a second reviewer with the audit trail

At fault options: Restaurant, Rider, Swiggy, Customer. On hold is not an action; it sits in the chat header (**H-11**).

9.2

Amounts

CASE	REFUND	SOURCE
Full refund, item issues (missing, wrong, quality, packaging, late)	Affected items + their 5% GST + delivery + packaging charges	Owner Law
Full refund, whole-order issues (not delivered, wrong address, charged twice, cancelled)	Whole order: all items + GST + delivery + packaging	Owner Published
Partial refund	Affected items' prices only; no GST or charges. The affected items are always included	Owner
Coupon (Partial only)	Applies only if the agent enters an amount; funded by Swiggy	Assumed
Tip	Never refunded (it goes to the rider)	Inferred

CASE	REFUND	SOURCE
Platform fee	Not modelled. Swiggy states it is non-refundable (PP19)	Published

9.3

Cost line

After an action and a fault are picked, one line states who pays. It follows the agent's choice of fault; it does not find fault itself.

AT FAULT	COST LINE
Restaurant, terms Full refunds	Restaurant pays the refund
Restaurant, terms Partial up to ₹X	Restaurant up to the cap; Swiggy pays the amount above it
Restaurant, terms No refunds	Swiggy pays the refund
Rider	Delivery partner pays (Inferred)
Swiggy	Swiggy pays
Customer (goodwill refund)	Swiggy pays (Inferred)
Any fault, Deny	"No refund · no cost moved"

9.4

Worked example

SW-2041, wrong item. Affected: Kadai paneer ₹240. Delivery ₹30, packaging ₹15, tip ₹20. Restaurant terms: full refunds.

ACTION	WORKING	AMOUNT
Full Refund	₹240 + ₹12 GST (5%) + ₹30 + ₹15	**₹297** · Restaurant pays
Partial	₹240 (item price only)	**₹240** · Restaurant pays
Deny	No refund	₹0

The tip (₹20) is excluded in every case.

9.5

Reasons

The Reason list changes with the action and the fault. Every list ends with "Other (see audit trail)".

ACTION	ALWAYS OFFERED	ADDED FOR THE FAULT PICKED
Full Refund	Evidence supports the claim · Customer clarified in chat	Restaurant: photo shows the issue; kitchen order and photo don't match; restaurant confirmed the error · Rider: trip record supports the claim; rider confirmed not handed over · Swiggy: platform or payment error · Customer: goodwill refund
Partial	Only part of the order was affected · Refund limited to the affected items	Restaurant delay or item issue · part damaged in transit · partial platform error · goodwill partial refund
Deny	Evidence does not show the issue · Records show it was delivered as ordered	Customer: customer-side cause; evidence does not match; evidence not enough · Restaurant: substitution agreed by the customer
Send Review	A review trigger fired · Records conflict · Amount above my approval limit · Need more input from the restaurant or rider · Customer flagged for inappropriate conduct	Nothing added

9.6

Changed

ID	EARLIER	FINAL
Full	~~Full = affected items + their GST~~	Full adds delivery and packaging charges; partial = item prices only; tip never refunded
Partial	~~Partial: agent ticks items~~	No item rows; the affected items are always included
Coupon	~~Coupon checkbox~~	Coupon applies only when an amount is entered

9.7

Not concluded

01	**Never** a suggested amount. The amount follows from the action the agent picks.
02	**Never** a liability finding from the cost line. Being due a refund does not settle who bears the cost (GN01).

↑ Back to index

H–10

FAIRNESS, TIME AND WORDS

Party history

How the past records of the customer, rider and restaurant are shown, so that no party looks more suspect by design.

History is shown openly rather than leave agents to look it up elsewhere: hidden history only moves the bias off-screen, where nobody can check it. It is labelled context, never a policy condition.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Data · Insight	Interaction history · History summary	2.1	H-08 · H-13

10.1

What is shown

WHERE	CUSTOMER	RIDER	RESTAURANT
History summary (insights column)	Refunded / Raised · Orders	Liable / Complaints · Deliveries	Upheld / Complaints · Orders
Interaction history (case column)	Last 5 cases, newest first, with days between them · View more opens the full list	Same	Same
Rating (beside the party tab)	Not shown	5-star average	5-star average

10.2

Rules

RULE	SOURCE
Every count is shown with its total ("4 of 20 orders"), never as a percentage or score	Owner
The same format for all three parties (fairness fix)	Owner
One window for everyone: 90 days	Assumed
No history reads "No history", never "low trust"	Owner
Rating colour bands: 4.0+ green, 3.0–3.9 amber, below 3.0 red	Assumed
Ratings not set in the case data are derived from the upheld rate	Assumed

10.3

Changed

ID	EARLIER	FINAL
Counts	~~Customer: refunds only; others: complaints~~	Raised and upheld out of total, for all three
Older	~~"Show older" on demand, logged~~	Last 5 + View more (the full 90-day list). "Show older" not built
Window	~~"90 days" stated on screen~~	Removed; the window is no longer written next to the counts

10.4

Not concluded

↑ Back to index

01	**Never** a fraud, risk or trust label for any party.
02	**Never** an action pre-selected or a case routed because of history.

H–11

FAIRNESS, TIME AND WORDS

Clocks, hold and report

The timers on screen, how a chat is put on hold, and how a party is reported.

DETAILS

LAYER	ON SCREEN	VERSION	RELATED
Data · Decision support	Queue rail · chat header	2.1	**H-03** · **H-10** · **H-14**

11.1

Clocks

CLOCK	ON SCREEN	NOTES
Queue wait	Yes, in the queue rail	From assignment until the agent first opens the chat
Chat timer	Yes, in the chat header	Counts handling time; pauses while on hold
Claim window (24 h)	No	Became an upstream gate (Assumed)
Agent reply-by (5 min)	No	In the frozen policy (Assumed); not built
Regulatory (48 h / 1 month)	No	Removed (Law). Held and review cases stay open, so someone outside this screen must own it

11.2

On hold

- The agent presses Put on hold and picks **who is responsible for the delay**: Customer, Rider or Restaurant.
- The chat stays with the same agent. The chat timer pauses; an amber pause icon shows in the header and a hold dot in the queue rail.
- The responsible party is written to the audit trail as an agent record only.
- Home shows On hold and Shelved tabs. Shelved = on hold for 30 minutes or more (Assumed); the shelved rows in the prototype are demo data.

11.3

Report

- Any party can be reported from the chat header; the report belongs to the party whose chat is open.
- Reasons: Abusive language in chat · Abusive language on call · Threats or harassment · Other. A note is required for Other.
- A reported party shows a red flag square while their chat is open. A second click removes the report.
- In S5, the reported customer's case goes to review with the report attached to the audit trail.

11.4

Priority

A red priority dot is set per ticket in the case data. No rule for setting it is defined, and it shows no reason on hover; this is open (**H-14**).

11.5

Not concluded

↑ Back to index

01	**Never** the hold's responsible party or a report as part of anyone's history.
02	**Never** automatic routing of a case because of a report, a hold or a complaint count.

H–12

FAIRNESS, TIME AND WORDS

Communications

The words the screen prepares for the agent to send, and the limits on that wording.

Every message is a draft the agent sends; nothing is sent automatically. Drafts are built from the agent's own choices (action, fault, amount), never from a system suggestion. The customer's replies in the prototype are scripted (Assumed).

DETAILS	LAYER	ON SCREEN	VERSION	RELATED
	Decision support	Customer chat · reply bar	2.1	**H-04** · **H-09** · **H-14**

12.1

Question templates

Offered above the reply bar only for policy checks that are Not met or Unknown.

ID	TEMPLATE
P1	Could you tell me a little more about what went wrong with the order?
P4	Could you confirm whether you paid the delivery partner in cash?
P5	Could you share a clear photo of the item you received, with the bag or bill if you still have it?
P6	I'm confirming how the refund for this order can be handled. Please give me a moment.

12.2

Decision message

Picking an action (with a fault, or Send Review) loads a draft that tells the customer the decision before Confirm.

ACTION	DRAFT (PATTERN)
Full Refund	[Name], since [reason for the fault picked], I'm going ahead with a full refund of ₹[amount].
Partial	…a partial refund of ₹[amount] for the [affected items] (plus a ₹[x] coupon, if entered).
Deny	[Name], based on what we've checked, I'm not able to offer a refund on this order.
Send Review	[Name], I'm passing your case to a senior colleague for a second review, with everything we've discussed.
If the customer pushes back	This is the final decision based on what we have, and I can't change it here. You can accept it, or I can send your case to someone else for review.

The decision itself never changes because of the reply.

12.3

Closing messages

DECISION	SEQUENCE
Full Refund or Partial	Thanks and what was checked → the refund amount, method and timing → apology → anything else? → goodbye
Deny	What was checked → the reason (in plain words) → how to raise it again from Help in the app → goodbye
Send Review	What was checked → why it needs a review → an update will come in the app → goodbye
Review after a report	The concern is noted and carried forward to a senior team → goodbye. No "thank you for your patience"

The agent sends at most two closing messages in a row; the customer replies in between.

12.4

Wording limits

- Customer messages never quote the 7–30 day grievance time (PP26) or the restaurants' 15-day settlement window (PP15).
- Delivery and credit times are estimates (PP05, PP16).
- No message asks for card details, a PIN or an OTP (PP22).

Two adopted wording items are not in the prototype, and the refund timing in the closing message differs from Swiggy's published estimate. Both are listed in **H-14**.

12.5

Not concluded

01	**Never** a promise of an outcome before the agent has picked one.
02	**Never** wording that implies the customer has no further remedy (GN07).

↑ Back to index

H–13

FAIRNESS, TIME AND WORDS

Never shown

Everything the screen must never show or conclude, in one list, with the reason for each.

These rules come from the brief: the interface supports the decision and never makes it. All five prototype tickets were checked against this list in testing (Stage 9): 5 of 5 passed.

DETAILS	LAYER	ON SCREEN	VERSION	RELATED
	All three	Nowhere, by rule	2.1	**H-05** · **H-06** · **H-10**

13.1

The list

NO.	NEVER SHOWN	WHY
01	A recommended outcome, or an action pre-selected	The agent decides; a default anchors the decision (automation bias)
02	A refund amount suggested by the system	The amount follows the agent's action, not the other way round
03	A fraud, risk, trust or value score for any party	Scores turn patterns into verdicts and bias the agent against a party
04	"Verified" or "suspicious" labels on evidence	The screen shows what evidence is, not whether to believe it
05	A predicted outcome for a review or escalation	Prediction is outside the project's rules
06	Automatic routing by complaint count	Routing is the agent's choice, with a reason, and is logged
07	A guess that the agent is struggling	Surveillance of the agent, not decision support
08	An overall "all checks met" verdict	Checks are inputs, not an answer
09	Sentiment scores, burnout scores, leaderboards or the agent's outcome mix on Home	Prediction, surveillance or pressure on future decisions
10	AI-drafted replies, mood banners or lead scores from the reference design systems	Rejected when the design systems were adapted

13.2

Not concluded

01	**Never** an exception to this list without it being written into the case study.

↑ Back to index

H–14

REFERENCE

Open choices and limits

Placeholder values, adopted items that were not built, known inconsistencies, and decisions still open.

Nothing here changes the prototype. The list exists so that a reader can see where the design rests on an assumption or differs from its own sources.

DETAILS	LAYER	ON SCREEN	VERSION	RELATED
	Not applicable	Not on screen	2.1	**H-02** · **H-B**

14.1

Assumed values

VALUE	USED IN	SOURCE
24 h claim window (upstream gate)	H-05	Assumed
₹500 high-value trigger	T1	Adapted Assumed
100 m · 7 min · 10 min grace	R1 · R3 · R4	Assumed
90-day history window	H-10	Assumed
Rating colour bands; derived ratings	H-10	Assumed
Planned times in the rider trip log	H-06	Assumed
Restaurant terms and their dates	H-07	Assumed
Shelved after 30 min on hold	H-11	Assumed
Customer replies, closing fillers, Agent ID AG-0417	H-12	Assumed

14.2

Adopted, not built

ITEM	IN THE PROTOTYPE
Refund destination: source by default, Swiggy wallet if the customer asks (Q7)	No
Platform-fee row in the order (non-refundable, PP19)	No
Fraud-safe line in closing messages ("Swiggy won't ask for your card details, PIN or OTP")	No
support@swiggy.in in the Deny message	No; it says "raise it again from Help in the app"

ITEM	IN THE PROTOTYPE
Routing restaurant disputes to partner support and rider issues to delivery-partner support	No
Report labelled "observation logged, not a fraud finding"	No
Photo tag chips the agent confirms	No

14.3

Known inconsistencies

WHERE	WHAT DIFFERS
Closing message	Says the refund reaches the account in "3–5 working days". Swiggy's published estimate for UPI and cards is 5–7 business days (PP16)
Pushback line	"This is the final decision" offers another review but not the customer's external remedies (GN07)
Cost line	Shows an internal label, "v1.3 mapping, Inferred", for a rider fault (testing finding F14)
Policy handbook pop-up	Still lists P7 and P8, which were removed from the checks
Issue-type list	17 subjects can be chosen; 5 have a designed path

14.4

Not built

- Similar (reference) cases opened by the agent.
- Three separate clocks: claim window, reply-by and regulatory.
- "Show older" history on demand.
- Click-to-highlight between a check and its evidence.
- Scenarios S1, S4 and S6.
- Safety escalation (Q4) and the packing-check fact (Q5): proposed, not adopted.

14.5

Gaps no source covers

CODE	GAP	HOW THE DESIGN FILLS IT
GAP01	Agent authority limits and reviewer roles	T1 ₹500 trigger; Send Review
GAP02	Reporting windows and evidence rules	24 h gate; P5 photo
GAP03	How missing-item claims and fraud are investigated	Report action; Send Review

CODE	GAP	HOW THE DESIGN FILLS IT
GAP04	Refund calculation	The project's refund rule (H-09)
GAP05	Refund status stages	Not shown
GAP06	Restaurant standing consent and recovery	Restaurant terms (H-07)
GAP07	Rider fault and proof of delivery	R1–R5; rider location at marking
GAP08	Safety escalation contacts	Nothing
GAP09	Escalation and appeal path	On hold; Send Review

14.6

Open decisions

↑ Back to index

- What sets the priority dot, or whether it goes (testing finding F5).
- Whether ratings stay coloured (finding F6) and what the thresholds are.
- What happens to assigned chats after sign-out.
- Order of the Subject of Error options; redesign of the Reason dropdown.
